

CS 3213 – Software Engineering 2

Learning Task # 1

Software Name: Pharmacy Management System

Team Name: PharmaOps

Team Members: Colico, Carl Renz M.

SECTION: 3A

Nonato, Francis Gabriel F.

Recommendations, Suggestions, and Comments

Panel 1: Noel V. Paguio Jr.

- This panel, after the presentation of the system, focuses on the RBAC and its underlying logic and seems to catch the attention of using the word "Patient," which in the context of Pharmacy should not be used because it is misaligned with the terminology of a Pharmacy system.

Panel 2: Allan O. Ibo Jr.

- After the panel deliberated on the PharmaOps system, Sir Ibo focused on the structure of the billing system and suggested incorporating a POS (Point of Sale) system to enhance the checkout experience and ensure that the overall delivered receipt or invoice is accurate, timely, secure, and compliant with user requirements.

Panel 3: Jayvee Niel Sias

- This last suggestion by the panel focuses on the integration of the medicine price; he suggested that we should implement it in the system wherein it manually detects the application of a discount to the customer. In the present system only a VAT is applied to each medicine.
